PROFESSIONAL SUMMARY

Results-driven Full Stack Developer with 3+ years of experience delivering enterprise-grade web applications for government portals and US-based SaaS clients. Specialises in building scalable Spring Boot microservices, high-performance REST APIs, and responsive Angular/React frontends. Consistently achieves 25–40% database and API performance gains through targeted optimisation. Proven ability to own features end-to-end — from requirements through production — within fast-paced Agile teams while maintaining 99%+ system uptime.

CORE COMPETENCIES

- ◆ REST API Design & Optimisation ◆ Database Performance Tuning
- ◆ Enterprise Security (JWT / RBAC / OAuth 2.0) ◆ Payment Gateway Integration ◆ Unit Testing

TECHNICAL SKILLS

Backend: Java, Spring Boot, Spring Security, C# (.NET Core), Node.js, REST APIs

Databases: MySQL, PostgreSQL, MongoDB, JPA/Hibernate, Query Optimization

DevOps & Tools: Git, Jenkins, Maven, Docker (basics), JIRA, Swagger, Postman

Frontend: Angular, React.js, TypeScript, HTML5, CSS3, RxJS

Architecture: JWT Auth, RBAC, OAuth 2.0, Webhook Integration

Testing: JUnit, Mockito, Unit Testing, 75%+ Code Coverage

PROFESSIONAL EXPERIENCE

Full Stack Developer | BDA – Government Project

2025 – Present

Mission-critical citizen-facing platform serving 100,000+ users across 5+ administrative workflows.

- ▶ Engineered 25+ secure REST APIs using .NET Core and Node.js, enforcing RBAC and JWT-based authentication across all endpoints.
- ▶ Cut API response times by 30–40% via MySQL schema redesign, strategic indexing, and query-level optimisation.
- ▶ Built responsive Angular UI modules that streamlined complex administrative workflows for government staff and citizens.
- ▶ Integrated Razorpay payment gateway end-to-end — including webhook handling for real-time payment status updates and reconciliation.
- ▶ Maintained 99%+ production uptime through proactive monitoring, alerting, and rapid incident response.

Full Stack Developer | DMS – Document Management System

2025 – Present

Scalable SaaS platform managing 50,000+ document lifecycle events with advanced full-text search.

- ▶ Architected a Spring Boot microservices backend exposing 12+ RESTful APIs for document ingestion, versioning, and retrieval.
- ▶ Delivered a React frontend featuring real-time search, paginated document browser, and drag-and-drop upload UI.
- ▶ Improved document retrieval speed by 35% through PostgreSQL query tuning, composite indexes, and connection-pool optimisation.

Full Stack Developer | Deal Modeler – US Client (SaaS)

2022 – 2024

Configurable deal workflow engine with dynamic business rules for enterprise clients.

- Designed scalable Spring Boot microservices and Hibernate ORM layer supporting configurable deal workflows for multiple enterprise tenants.
- Created REST APIs that enabled business-rule updates via configuration — eliminating code-change deployments for rule modifications.
- Built Angular data-driven components with real-time financial calculations, reducing data-entry errors for deal analysts.
- Reduced complex SQL transaction processing time by 25% through stored procedure refactoring and execution plan analysis.

Full Stack Developer | Contract Authoring & iDeal – US Clients

2023 – 2024

Backend optimisation and reusable component development across two concurrent US client engagements.

- Developed robust REST services with Java/Spring Boot and JPA/Hibernate, handling complex contract data models.
- Built a shared Angular/React component library that reduced front-end duplication by ~40% and accelerated feature delivery.
- Authored 50+ unit tests using JUnit and Mockito, raising code coverage to 75%+ and significantly reducing regression defects.
- Enhanced database indexing and query patterns, delivering a 20% improvement in query execution efficiency.

EDUCATION

Bachelor of Engineering (B.E.) – Computer Science

Graduated 2022 · CGPA: 8.15 / 10

Vivekananda College of Engineering and Technology, Puttur · Visvesvaraya Technological University (VTU)

KEY ACHIEVEMENTS

-
- **Performance Champion:** Consistently delivered 25–40% API and database performance improvements across all projects — measured through profiling, query plans, and load testing.
 - **Scale & Reliability:** Maintained 99%+ uptime for a government platform serving 100K+ concurrent citizens, with zero critical production incidents in 12 months.
 - **Security-First Mindset:** Implemented JWT, RBAC, and OAuth 2.0 across multiple enterprise systems, with zero reported authentication vulnerabilities post-deployment.
 - **Payment Integration:** Successfully delivered Razorpay end-to-end integration with real-time webhooks and reconciliation — a first-time implementation for the project team.

ADDITIONAL INFORMATION

Languages Kannada (Native) • English (Professional) • Hindi (Conversational)

Currently Learning Docker, Kubernetes basics, AWS (EC2 / S3), system design patterns

Availability Immediate joiner • Open to hybrid/remote roles across India
