

ADARSHA KN

Full Stack Developer | Spring Boot | Angular | React

+91 9483623871 | adikanchimoole@gmail.com | <https://linkedin.com/in/adarsha-kn-5b6937216> | Karnataka, India

PROFESSIONAL SUMMARY

Full Stack Developer with 3+ years building high-performance enterprise and SaaS platforms for government and US-based clients. Expert in designing scalable Spring Boot/Node.js backends, RESTful APIs, and responsive Angular/React frontends. Proven track record optimizing database performance (25-40% improvements), implementing enterprise security, and delivering mission-critical systems with 99%+ uptime in Agile environments.

TECHNICAL SKILLS

Backend: Java (Spring Boot, Spring Security), C# (.NET Core), Node.js, REST APIs

Frontend: Angular, React.js, TypeScript, HTML5, CSS3

Databases: MySQL, PostgreSQL, MongoDB, JPA/Hibernate

Architecture: Microservices, JWT Auth, RBAC, OAuth 2.0

Tools: Git, Jenkins, JIRA, Maven, JUnit, Mockito, Swagger, Postman

PROFESSIONAL EXPERIENCE

Full Stack Developer | BDA – Government Project | 2022 – Present

Mission-critical backend services and responsive UI for citizen-facing workflows serving 100K+ users.

- Engineered 25+ secure REST APIs using .NET Core and Node.js with RBAC and JWT authentication
- Reduced API response time by 30–40% through MySQL optimization and database indexing
- Developed responsive Angular UI modules enhancing user experience across 5+ administrative workflows
- Maintained 99%+ uptime through proactive monitoring and critical issue resolution

Full Stack Developer | DMS – Document Management System | 2022 – Present

Scalable microservice platform for document lifecycle management with advanced search (50K+ documents).

- Developed microservice backend using Spring Boot and JPA with 12+ RESTful APIs
- Built React frontend with real-time search and document browser UI
- Optimized PostgreSQL queries improving document retrieval performance by 35%

Full Stack Developer | Deal Modeler – US Client (SaaS) | 2022 – Present

Configurable deal workflow engine with dynamic business rules for enterprise clients.

- Built scalable backend microservices using Spring Boot and Hibernate for configurable workflows
- Designed REST APIs enabling dynamic business rule configuration without code changes
- Developed Angular data-driven UI components with real-time calculations
- Optimized SQL performance in complex transactions, reducing processing time by 25%

Full Stack Developer | Contract Authoring & iDeal – US Clients | 2022 – Present

Microservices-based platforms with focus on backend optimization and automation.

- Developed backend REST services using Java/Spring Boot with JPA/Hibernate ORM layer
- Built reusable Angular/React components improving maintainability and reducing duplication
- Increased code reliability with 50+ unit tests using JUnit and Mockito (75%+ coverage)
- Enhanced database indexing and query optimization, improving efficiency by 20%

EDUCATION

Bachelor of Engineering (B.E.) – Computer Science

Vivekananda College of Engineering and Technology, Puttur

KEY STRENGTHS

- Performance Optimization: Database tuning, API optimization, consistently delivering 25–40% improvements
- Security & Scalability: JWT auth, RBAC, microservices architecture for enterprise-scale applications
- End-to-End Ownership: Drive features from requirements through design, development, and production deployment
